In July 2010, the National Research Council (NRC) appointed the Committee to Review the 21st

Century Truck Partnership, Phase 2, to conduct an independent review of the 21st Century Truck Partnership (21CTP). The 21CTP is a cooperative research and development (R&D) partnership including four federal agencies--the U.S. Department of Energy (DOE), U.S. Department of Transportation (DOT), U.S. Department of Defense (DOD), and the U.S. Environmental Protection Agency (EPA)--and 15 industrial partners. The purpose of this Partnership is to reduce fuel consumption and emissions, increase heavy-duty vehicle safety, and support research, development, and demonstration to initiate commercially viable products and systems. This is the NRC's second report on the topic and it includes the committee's review of the Partnership as a whole, its major areas of focus, 21CTP's management and priority setting, efficient operations, and the new SuperTruck program.

Amy Scott-Simon, a young New York heiress, is engaged to marry Max Diamond, an older powerful real estate tycoon. At her bachelorette party, she runs into Jett, Max's younger half-brother who is fresh back from Italy, where he is a successful male model. They have no idea who each other are. A one night fling leads to complications and regrets. Meanwhile, Chris Diamond -- a hot L.A. entertainment lawyer -- flies into town to meet with his two brothers and Red Diamond, the boys'

dysfunctional billionaire father. Working as Red's housekeeper is Diahann, whose stunning bi-racial nineteen-year-old daughter, Liberty, does not approve of her mother's occupation. As Liberty pursues the dreams her mother once had, to sing, Damon P. Donnell, married hip-hop mogul supreme, pursues her. And then there is Mariska, Max's Russian socialite ex-wife, a woman with more secrets than anyone, secrets that ultimately lead to her brutal and mysterious murder. As the lives of these characters intertwine, power, love, sex, money and fame are the ties that bind in this highly charged love story about family relationships, deadly choices and dangerous sex.

Logistics Transportation Systems compiles multiple topics on transportation logistics systems from both qualitative and quantitative perspectives, providing detailed examples of real-world logistics workflows. It explores the key concepts and problem-solving techniques required by researchers and logistics professionals to effectively manage the continued expansion of logistics transportation systems, which is expected to reach an estimated 25 billion tons in the United States alone by 2045. This book provides an ample understanding of logistics transportation systems, including basic concepts, in-depth modeling analysis, and network analysis for researchers and practitioners. In addition, it covers policy issues related to transportation logistics, such as security, rules and regulations, and emerging issues including reshoring. This book is an ideal guide for academic researchers and both undergraduate and graduate students in transportation modeling, supply chains, planning, and systems. It is also useful to transportation practitioners involved in planning, feasibility studies, consultation and policy for transportation systems, logistics, and infrastructure. Provides real-world examples of logistics systems solutions for multiple transportation modes, including seaports, rail, barge, road, pipelines, and airports. Covers a wide range of business aspects, including customer service, cost, and decision analysis. Features key-term definitions, concept overviews, discussions, and analytical problem-solving. *Effectiveness and Impact of Corporate Average Fuel Economy (CAFE) Standards* Haynes Manuals N. This book offers the current state of knowledge in the field of biofuels, presented by selected research centers from around the world. Biogas from waste production process and areas of application of biomethane were characterized. Also, possibilities of applications of wastes from fruit bunch of oil palm tree and high biomass/bagasse from sorghum and Bermuda grass for second-generation bioethanol were presented. Processes and mechanisms of biodiesel production,

including the review of catalytic transesterification process, and careful analysis of kinetics, including bioreactor system for algae breeding, were widely analyzed. Problem of emissivity of NOx from engines fueled by B20 fuel was characterized. The closing chapters deal with the assessment of the potential of biofuels in Turkey, the components of refinery systems for production of biodegradable plastics from biomass. Also, a chapter concerning the environmental conditions of synthesis gas production as a universal raw material for the production of alternative fuels was also added.

This text aims to present and discuss the innovative Volvo Uddevalla plant, comparing it to other plants - Japanese lean ones and others. The starting point for the book is Volvo's dramatic decision to close its Uddevalla and Kalmar plants, and the debate that followed this decision, both in Sweden and abroad. Both plants were pioneers of the possibilities to unite productivity and the good work, but, following the announcement of their closure, researchers and practitioners in the field of industrial organization from many countries asked why they closed, how they compared with other production concepts, and whether we now see an end of an alternative to Japanese lean production.
