"Covering 370 common household objects, from ice crushers and vacuum cleaners to hair dryers and fans, this book celebrates the variety of housewares produced for the modern home. Each selection is illustrated with a gorgeous, full-color photograph that showcases its unique design and artistic qualities, along with a miniature black-and-white reference picture that supplies essential data, such as the name of the object, country of

origin, date, manufacturer, designer, dimensions, and materials used. This catalog of objects will appeal to designers and collectors of housewares."

Book of Abstracts of
the 70th Annual Meeting of the European
Federation of Animal Science

This Book of Abstracts is the main publication of the 70th Annual Meeting of the European Federation of Animal Science (EAAP). It contains abstracts of the invited papers and contributed presentations of the sessions of EAAP's eleven Commissions: Animal Genetics, Animal Nutrition, Animal Management and Health, Animal Physiology, Cattle Production, Sheep and Goat Production, Pig Production, Horse Production and Livestock Farming Systems, Insects and Precision Livestock Farming.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Our America Simon and Schuster

The 16 papers in this volume constitute a summary of recent research on the geological architecture and environment of the Fraser River delta, and the physical and chemical processes operating on it.

The first two papers are overviews of the geological and seismic setting of the delta. The next two papers summarize present-day sedimentary environments on the delta. A third group of papers covers the geological architecture, or lithostratigraphy, of the delta and the biological structure or biofacies of the delta. The final group of papers is concerned with natural hazards and environmental issues, including earthquakes, geotechnical stability, and seafloor sediment geochemistry.

Geology and Natural Hazards of the Fraser River Delta, British Columbia Legare Street Press

Nutrient recycling, habitat for plants and animals, flood control, and water supply are among the many beneficial services provided by aquatic ecosystems. In making decisions about human activities, such as draining a wetland for a housing development, it is essential to consider both the value of the development and the value of the ecosystem services that could be lost. Despite a growing recognition of the importance of ecosystem services, their value is often overlooked in environmental decision-making. This

report identifies methods for assigning economic value to ecosystem services—“even intangible ones”—and calls for greater collaboration between ecologists and economists in such efforts.

The expanded guide to cardiac mapping The effective diagnosis and treatment of heart disease may vitally depend upon accurate and detailed cardiac mapping. However, in an era of rapid technological advancement, medical professionals can encounter difficulties maintaining an up-to-date knowledge of current methods. This fifth edition of the much-admired Cardiac Mapping is, therefore, essential, offering a level of cutting-edge insight that is unmatched in its scope and depth. Featuring contributions from a global team of electrophysiologists, the book builds upon previous editions' comprehensive explanations of the mapping, imaging, and ablation of the heart. Nearly 100 chapters provide fascinating accounts of topics ranging from the mapping of supraventricular and ventricular arrhythmias, to compelling extrapolations of how the field might

develop in the years to come. In this text, readers will find: Full coverage of all aspects of cardiac mapping, and imaging Explorations of mapping in experimental models of arrhythmias Examples of new catheter-based techniques Access to a companion website featuring additional content and illustrative video clips Cardiac Mapping is an indispensable resource for scientists, clinical electrophysiologists, cardiologists, and all physicians who care for patients with cardiac arrhythmias.

Electrical activity in the myocardium coordinates the contraction of the heart, and its knowledge could lead to a better understanding, diagnosis, and treatment of cardiac diseases. This electrical activity generates an electromagnetic field that propagates outside the heart and reaches the human torso surface, where it can be easily measured. Classical electrocardiography aims to interpret the

12-lead electrocardiogram (ECG) to determine cardiac activity and support the diagnosis of cardiac pathologies such as arrhythmias, altered activations, and ischemia. More recently, a higher number of leads is used to reconstruct a more detailed quantitative description of the electrical activity in the heart by solving the so-called inverse problem of electrocardiography. This technique is known as ECG imaging. Today, clinical applications of ECG imaging are showing promising results in guiding a variety of electrophysiological interventions such as catheter ablation of atrial fibrillation and ventricular tachycardia. However, in order to promote the adoption of ECG imaging in the routine clinical practice, further research is required regarding more accurate mathematical methods, further scientific validation under different preclinical scenarios and a more extensive clinical validation

Soil Pollution - An Emerging Threat to Agriculture Better Homes & Gardens Books

Vaccinophobia and Vaccine Controversies of the 21st Century Archana Chatterjee, editor Once hailed as a medical miracle,

vaccination has come under attack from multiple fronts, including occasionally from within medicine. And while the rates of adverse reactions remain low, suggestions that vaccines can cause serious illness (and even death) are inspiring parents to refuse routine immunizations for their children--ironically, exposing them and others to potentially serious illness. Vaccinophobia and Vaccine Controversies of the 21st Century explains clearly how this state of affairs came into being, why it persists, and how healthcare professionals can best respond. Current findings review answers to bedrock questions about known adverse events, what vaccine additives are used for, and real and perceived risks involved in immunization. Perspectives representing pediatricians, family practitioners, nurses, parents, pharmacy professionals, the CDC, and the public health community help the reader sort out legitimate from irrational concerns. In-depth analyses discuss the possibility of links with asthma, cancer, Guillain-Barre syndrome, SIDS, and, of course, autism. Included in the coverage: Communicating vaccine risks and benefits The vaccine misinformation landscape in

family medicine Perceived risks from live viral vaccines The media's role in vaccine misinformation Autoimmunity, allergies, asthma, and a relationship to vaccines Vaccines and autism: the controversy that won't go away The conundrums described here are pertinent to practitioners in pediatrics, family medicine, primary care, and nursing to help families with informed decision making. In addition, Vaccinophobia and Vaccine Controversies of the 21st Century should be read by trainees and researchers in child development and maternal and child health as the book's issues will have an impact on future generations of children and their families.

Book of Abstracts of the 72nd Annual Meeting of the European Federation of Animal Science John Wiley & Sons

This book informs about knowledge gain in soil and land degradation to reduce or

prevent it for meeting the mission of the Sustainable Developments Goals of the United Nations. Essence, extent, monitoring methods and implications for ecosystem functioning of main soil degradation types are characterized in overview chapters and case studies. Challenges, approaches and data towards identification of degradation in the frame of improving functionality, health and multiple ecosystem services of soil are demonstrated in the studies of international expert teams. The book consists of five parts, containing 5-12 single chapters each and 36 in total. Parts are explaining (I) Concepts and Indicators, (II) Soil Erosion and Compaction, (III) Soil Contamination, (IV) Soil Carbon and Fertility Monitoring and (V) Soil Survey and Mapping of Degradation The primary audience of this book are scientists of different disciplines, decision-makers, farmers and further informed people dealing with sustainable management of soil and land.

Aromatic Rices National Academies Press Offers advice on using a bread machine and gathers recipes for sweet breads, pizza crust, flatbreads, savory loaves,

sourdoughs, and whole grain breads Health Devices Sourcebook Springer Following the familiar, easy-to-use at a Glance format, OSCEs at a Glance 2nd Edition is both a revision guide and a comprehensive introduction to objective structured clinical examinations for medical students. Fully revised to suit the current curriculum, and written with student feedback and experiences in mind, this full-colour textbook contains brand new and comprehensively indexed chapters which include 32 new OSCE stations, covering distinct areas of specialisation as well as broader practical and communication skills covered in the exams. This new edition of OSCEs at a Glance is also supported by a companion website at www.ataglanceseries.com/osces containing downloadable OSCE checklists - perfect for testing knowledge in the run-up to exams. This title is also available as a mobile App from MedHand Mobile Libraries. Buy it now from Google Play or the MedHand Store. Following on from the very popular first book *CyNurse Facilitated Hospital Discharge* in these challenging economic times, with change and cost saving being predominant features in the NHS, I offer you, the reader, a thought: The faster the speed at which you travel, the further ahead you need to look, to adapt current practice, and align it to future needs, to deliver value for money. *Liz Lees Timely Discharge From Hospital* is aimed at practitioners working in acute, community, intermediate and ambulatory care settings; all areas of practice are featured. Each section is arranged in themes but written to stand alone, allowing the reader to dip in and out. The book is further enhanced by a comprehensive selection of case studies. Part 1: Fundamental perspectives of practice there are 3 leading chapters which set the scene for the

discharge of patients from hospital. Part 2: The UK perspective there are 4 chapters which demonstrate policy, practice and progress regarding discharge planning in England, Ireland, Scotland and Wales. Part 3: Education and training there are 3 chapters which interface theory with practice providing a sense of direction in education to lead and support practitioners wishing to develop mechanisms for training. Part 4: Multi professional considerations of patient discharge in practice there are 7 chapters which explore the contribution of different professionals to timely discharge practice. The Nursing coordination & complex discharge issues, Pharmacy, PALS, Medicine, Occupational Therapy and Bed management are all featured. Part 5: Case examples in practice there are 14 pragmatic cases which illuminate practice points from a clinical perspective."

Based on lectures that Brakhage gave at the school of the Art Institute of Chicago, this volume portrays eight artists who have electrified American independent cinema across four decades. With characteristic directness, anecdotal style, and wry humor, Brakhage, himself an influential American independent filmmaker, brings into sharp focus the life and work of Jerome Hill, Marie Menken, James Broughton, Maya Deren, Ken Jacobs, Sidney Peterson, Bruce Conner, and Christopher MacLaine. He also portrays the art scenes of New York and San Francisco during times of ferment and controversy. ISBN 0-914232-99-1: \$20.00.

This volume brings together papers from geotechnical and civil engineers, biologists, ecologists and foresters. They discuss current problems in slope stability research and how to address them using ground bio- and eco-engineering techniques. Coverage presents studies by scientists and practitioners on slope instability, erosion, soil hydrology, mountain ecology, land use and

restoration and how to mitigate these problems using vegetation.
